REPORT

RELATING TO THE REGISTRATION OF

Births, Marriages and Deaths

IN THE

PROVINCE OF ONTARIO

FOR THE

Year Ending 31st December,

1923

(Being the 54th Annual Report)

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO:

Printed and Published by Clarkson W. James, Printer to the King's Most Excellent Majesty

1925

To His Honour the Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Fifty-fourth Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario, during the year 1923.

Respectfully submitted,

LINCOLN GOLDIE,

Registrar-General of Ontario.

SIR:—

I have the honour to submit for your approval the Fifty-fourth Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1923.

I have the honour to be, Sir,

Your obedient servant,

Deputy Registrar-General.

TO ^rHON. LINCOLN GOLDIE,
Registrar-General of Ontario.

REPORT UPON

Births, Marriages and Deaths

FOR THE YEAR 1923

Herewith is presented the Fifty-fourth Report of Vital Statistics for the Province of Ontario for the year 1923.

POPULATION

The estimated population for 1923 is 3,028,907. The city municipalities contain 1,205,908 or 40% of the whole; the towns of 5,000 population and over, 162,200, or 5.4%; while the balance, 1,650,799, or 54.5%, is contained in the villages, towns under 5,000 population and the rural portions of the Province.

BIRTHS (EXCLUDING STILL-BIRTHS)

	1923	Ratio	1922	Ratio
Entire Province.....	70,056	23.1	71,320	23.9
Cities.....	30,334	24.9	30,645	25.7
Towns.....	4,911	30.3	4,855	30.3
Rural.....	34,811	23.1	35,820	22.0

There was a numerical decrease of 1,264 births in the whole Province; this represents 1.8%, and is a slight continuation of that following 1922, when the decline was 3.8%.

For comparative purposes the number of births and birth rate for a decade are herewith presented:

Year	Births	Ratio	Year	Births	Ratio
1914.....	66,225	25.0	1919.....	62,774	22.0
1915.....	67,032	24.9	1920.....	72,511	25.1
1916.....	65,264	23.9	1921.....	74,152	25.3
1917.....	62,666	22.6	1922.....	71,320	23.9
1918.....	64,729	23.0	1923.....	70,056	23.1

Of the births, 36,141 or 51.6% males, and 33,915 or 48.4% females, being 106.5 males to 100 females. The largest number of births occurred, as usual, in the month of March, being 6,395.

Following is a table giving the ages of the parents. It may be noted that the largest number of children were born to mothers 26 years of age; last year the largest number was to mothers of 25 years. Although not appearing in the table, there was one mother 58 years of age.

ILLEGITIMATE BIRTHS

There were 1,579 illegitimate births registered, which gives a rate of 22.5 per 1,000 living births. This is 1.3 higher than in 1922. Over 40% of these children were born to mothers under 20 years of age; 65.3% to mothers under 23 years, and 77.8% were born to mothers under 26 years.

MULTIPLE BIRTHS

There were 744 pairs of twins, being 791 boys and 697 girls. Eighteen boys and fifteen girls were included in eleven cases of triplets.

STILL-BIRTHS

There were 3,028 still-births registered as births, as compared with 3,115 so registered in 1922. Still-births as births and as deaths are not considered statistically. Of course the number registered does not indicate in any degree the number of conceptions which occur where the results do not bring full born children into the world. When intrauterine life does not reach viable age, the issue are not registered as births or as deaths, and this fact and the difficulty or impossibility of knowing exactly how many conceptions occur hamper the study of infant mortality.

These births are not included in any statistics whatever. They are noted here for information only. The number registered as births was 3,028. There were 2,960 registered as deaths.

Year	As Births	As Deaths
1914.....	1,469	2,745
1915.....	2,246	2,807
1916.....	2,055	2,518

1921.....	3,234	3,046
1922.....	3,115	2,946
1923.....	3,028	2,960

Including the still-births with the living births for the moment, the rate is 41.4 still-births in every 1,000 births.

MARRIAGES

The number of marriages registered during the year was 24,842, distributed as follows:

	1923	Ratio	1922	Ratio
Entire Province.....	24,842	8.2	23,360	7.8
Cities.....	14,421	11.9	13,336	11.2
Towns.....	1,780	11.0	1,607	10.0
Rural.....	8,641	5.2	8,417	5.2

There was an increase of 1,482 marriages during the year over the number in 1922, representing an increase of 5.8%. This small increase represents a ratio increase of but 0.4, and is a long way from the ratio of pre-war days when the rate fell off every year until the signing of the armistice. The increase which followed in 1919 and 1920 seemed promising, but a decline came owing to economic conditions, and until a more normal condition makes itself evident the marriage rate will not likely improve greatly.

DEATHS

The number of deaths which were registered during the year 1923 was 35,636, which is a ratio of 11.8 per 1,000 of population. This is a numerical increase of 1,602 deaths, and an increase of 0.4 in the rate, which corresponds with the rate for 1921.

Excepting influenza, diphtheria and paralysis as causes, the others have been consistent over a long period of years. These causes are outstanding and account for over 50% of all deaths. Their positions from year to year change somewhat, as will be seen in the following table. The first column contains the ten causes in sequence of ratio per 100,000 of population, as they were in 1914, and the changes from that position are shown in the other columns. Please note that the positions of the causes of death in this table do not in any way indicate rates per 100,000 of population, but the relative positions as the ten highest causes of death.

DEATHS FROM TUBERCULOSIS

The number of deaths from tuberculosis of all classes, registered in 1923, was 1,989, giving a rate per 100,000 of population of 65.6, and is the lowest rate ever recorded in Ontario, being the fruit of many years of fighting the white plague. Nor is the battle won, for it is the ideal of every endeavour to make this disease as scarce and as controllable as typhoid fever.

The following table shows deaths from tuberculosis by age groups for a decade.

Tuberculosis held second place as a cause of death in 1914, but now holds fifth place.

ORGANIC HEART DISEASES

Under this heading are included deaths from pericarditis, myocarditis, endocarditis, angina pectoris, and all other diseases affecting the muscle. The number of deaths was 4,373, being a rate of 142.0 per 100,000 of population.

Heart disease holds first place as a cause of death and in the decade was displaced but twice, and each time by influenza, during the two epidemics which occurred in the years 1918 and 1920.

CANCER

There were 2,724 deaths from cancer registered, giving a rate of 90.0 per 100,000 of population. The increase in both the number and the rate continues.

During the decade the rate has increased from 69.6 to 90.0, being an increase of 20.4 per 100,000 of population.

Twenty years earlier (1904) the rate was 54.8 and in 1913 it was 69.3, giving an increase in the rate in that decade of 14.5. The mean rate for the first decade was 61.0 and for the second 80.0, being an increase, the latter over the former, of 31%.

The following table shows the sites of the cancer:

The rates from communicable diseases show an increase in every case but that of deaths from diphtheria.

Diphtheria in 1923 dropped to the lowest point it has ever reached, viz., 10.4 per 100,000 of population. Its highest point in a period of nineteen years was reached in 1920, when the rate was 25.7. Not since 1904 had such a rate been reached. In that year it was 26.6 and earlier than that the rate was higher.

The rate from typhoid fever is somewhat higher and is higher than it has been since 1917, when it was 9.1 per 100,000.

Influenza as a cause of death became quite active again. It caused 2,098 deaths, being a rate of 69.3 per 100,000 of population. This is the fourth epidemic of influenza in six years. Fortunately those of 1919, 1920 and 1923 were far below that of 1918.

INFANT MORTALITY

The deaths registered for 1923 of infants under one year was 5,950, being a rate of 84.9 per 1,000 living births, which is 1.9 above the rate for 1922. The rate in 1922 is the lowest ever experienced by the Province.

The chief causes of deaths for the last ten years is herewith appended.
